

Fast, Proven Service to Clean Your Farm of Bird Flu (Avian Influenza)

Highly pathogenic avian influenza (HPAI), is an extremely infectious and fatal disease that, once established, can spread rapidly throughout your flock and into surrounding farms. Swift, meticulous and thorough response is the only way to ensure that your poultry farm or other bird facility returns to full production with the least amount of disruption. You need Clean Harbors.

As the largest emergency response provider in North America, we have the strategically-placed resources to provide the fastest, most comprehensive Agricultural Cleaning and Bio-Containment Services available.

Our turnkey services are delivered by trained experts using company-owned assets, giving you the agility and nimbleness to act quickly and effectively, no matter where your facility may be.

Our training and service methodologies are based on OSHA standards, USDA criteria and the highest biosecurity principles, and have a proven track record of success in the latest North America activity.

Bogged down in paperwork?

When time is of the essence, you can't afford to be slowed by red tape. We can help with such things as the USDA Forms and many of your insurance documents.

One call gets you to the same experts that work with the federal and state agencies and your local agricultural representatives.

AGRICULTURAL CLEANING AND BIO-CONTAINMENT SERVICES

BIOSECURITY

Our teams follow the strictest bio-security measures to help protect your facility and neighboring farms from the spread of the infection.

DEPOPULATION

Our crews are trained and experienced in all acceptable depopulation processes and we follow all USDA-approved protocols.

Mobile onsite incinerators strategically placed across the United States

DISPOSAL

On-site methodologies help minimize the offsite spread of the infection. Clean Harbors provides all three USDA-approved onsite disposal methods. We also offer offsite disposal using our own transportation equipment and decontamination process, which reduces risk by avoiding handoff to a third party.

CLEANING

Dry, Wet, Disinfection and Heat processes are combined as needed to maximize cleaning effectiveness for your site and get you back in operation quickly.

TRANSPORTATION

Our trucks and containers transport all waste to local, approved landfills or disposal facilities. We perform a thorough decontamination process before leaving and returning to your site and all routes are pre-approved to minimize potential impact to clean facilities. Pre-staged Response teams are in place to react immediately to transportation issues.
