ENVIRONMENTAL SERVICES

Online Services

Clean Harbors Online Services help customers manage their EH&S Clean Harbors Outage and Turnaround Support Services programs more efficiently by offering comprehensive waste and compliance management tools from Clean Harbors website at www.cleanharbors.com.

The services are designed for environmental managers, engineers, chemists and other environmental professionals who are responsible for the tracking, removal and disposal of waste materials.

Profile Management

The paperless submittal process using the profile module allows you to create, submit, edit and view all of your Clean Harbors profiles. With the electronic signature feature, approvals are expedited. Templates provide a simple method to create profiles for many common waste types such as batteries, bulbs, aerosols and paints—reducing data entry and accelerating approvals. You can even attach files such as material safety data sheets and analytical results for retrieval and digital archiving.
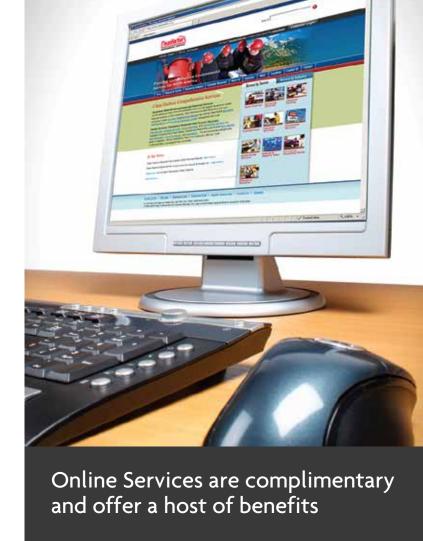

Drum Scheduling

Conveniently schedule a drum pickup 24/7 using this efficient process reducing phone, fax and email exchanges. The Drum Scheduling tool allows you to order replacement containers and supplies for delivery with your next waste shipment. The advanced scheduling system offers the flexibility of choosing from our predefined transportation schedule in your area or selecting a date that best fits your needs.

Management Reports

You can run a variety of management reports for internal tracking and regulatory reporting for any of your facilities. Our reports include manifest tracking, waste tracking, biennial data, certificates of disposal, inventory, profile summary, invoice summary and user access. Most reports offer a spreadsheet option for further analysis.

Online Services are complimentary and offer a host of benefits

Customers benefit from 24/7 access to their profiles, drum scheduling, reports, inventory, user rights and images of invoices, signed manifests and weight tickets by using Online Services.

Inventory Management

Online Services provide management of waste containers of all sizes accurately and efficiently throughout your facility. Track drums, lab packs and smaller quantities to geographical areas or business units. Instantly view details and audit your waste easily. Integrated with Drum Scheduling, seamlessly add your inventory to a drum request.

User Rights

Default rights are granted to users within Clean Harbors Online Services. Default user rights can be modified by a User Administrator providing "View Only" access to applications or restricting access to sensitive reports.
